

Verity — Comparison Report

Calibrated weight of evidence for a forensic surface comparison

Case/exhibit: DEMO-2026-001

Examiner: E. Hare

Likelihood ratio

LR = 146.0 $\log_{10} \text{ LR} = +2.16$ (95% CI on $\log_{10} \text{ LR}$: [1.83, 2.16])
moderately strong support for same source

Direction	same source
Score	0.1527 (bullet-contrast)
Reference population	pooled bullet-land reference (Hamby-252 & 173, Beretta)
Reference size	146 same-source / 1755 different
Calibration cost (Cllr)	0.193 (floor 0.168)
Discrimination (AUC)	0.984
LR bound log10 LR	2.16
Domain	striated

Method & provenance

Engine / API version	0.1.0 / 0.1.0
Scorer	bullet-contrast

Scope. This is a calibrated weight of evidence on the pooled bullet-land reference (Hamby-252 & 173, Beretta, Phoenix) reference population; it is not a claim about the error rate of striated examination, which remains unknown.

Attribution — the congruent regions that drove the comparison

Mark A — matched regions

Mark B — matched regions

Highlighted regions are the congruent matching regions (the examiner-facing evidence). This shows what the score is built on; it is not a separate claim.
